

Patient	Vaishali Gondge	Patient ID	: 69458115
Age/Gender	37 Years/F	Lab/Case No	: BC01/0325/5711
Ref. By/Di	Dr Prashant Kharwade	Collected On	: 27/03/2025 4:54PM
Consultant Dr.		Reported On	: 27/03/2025 6:12PM
Reference		Laboratory	: VCare Diagnostic Kalyan

USG OF WHOLE ABDOMEN

LIVER: Liver is normal in size, shape & echotexture. No evidence of focal lesion noted. The intrahepatic portal & biliary radicals are normal. The portal vein & common bile duct appears normal in course & caliber.

GALL BLADDER: Gall bladder is well distended. Its walls are regular & show normal thickness. No evidence of gallstones or sludge noted within.

PANCREAS: Pancreas is normal in size, shape & contour. It shows homogeneous parenchymal echopattern. No evidence of focal lesion noted.

SPLEEN: Spleen is normal in size, shape & echotexture. No evidence of focal lesion noted.

KIDNEYS: Both kidneys are normal in size, shape & echotexture. No evidence of calculi or hydronephrosis is seen in either kidney. Corticomedullary differentiation is maintained.

Right kidney measures: 10.8 X 3.8 cms.

Left kidney measures: 10.1 X 4.5 cms.

URINARY BLADDER: Urinary bladder is well distended. Its walls are regular & show normal thickness. No calculi or intraluminal mass lesion seen within.

UTERUS: Uterus is anteverted, normal in size & shape. It measures 7.4 X 3.6 X 4.5 cms in longitudinal, transverse & AP axis respectively. The myometrial echotexture is normal. No evidence of focal lesions noted. Endometrial thickness measures 7.0 mm.

OVARIES: Both ovaries are normal in size, shape & echotexture. No evidence of adnexal mass.

No evidence of significant lymphadenopathy is seen in the abdomen.

Mild free fluid is noted in pouch of Douglas.

Bowel & retroperitoneal assesment is suboptimal due to bowel gases.

OPINION: Mild free fluid in pouch of Douglas could be s/o pelvic inflammatory disease.

Suggest-clinico-pathological correlation.
